

- (font) family
- (font) face
- (font) colour
- (font) size (in points)
- hjust [0..1] (0=left, 1=right)
- vjust [0..1] (0=bottom, 1=top)
- angle (in degrees)
- lineheight (as ratio of fontcase)
- margin
 - margin (t, r, b, l)
 - #remember trouble

- (line) colour
- size (width of line)
- linetype
 - An integer (0:8)
 - A name ("blank", "solid", "dashed", "dotted", "dotdash", "longdash", "twodash")
- linend
 - "round", "butt", "square"
- arrow
 - An arrow specification: arrow(

- fill
- colour
- size (width of border)
- linetype (of border) (see `element_line`)

- Eliminates element
- Doesn't take parameters

Of those elements that have two components, the way to access is by appending .x or .y at the end. e.g. axis.line.y will change only the “y” axis line. Idem with “x”. If nothing is specified (e.g axis.line), both elements (x and y) will be changed.

text element_text()	line element_text()
rect element_rect()	title element_text()
